FINE CERAMIC TILES

In **Italy** in the **late 50's early 60's** started the productions industrialized of **CERAMIC TILES** surfaces , it was a passage from the hand made ceramic tiles artigianally made mainly in the south west coast of Italy and the islands.

Initially these industries started in rural areas where the Italian government supported the development of new industries to create new job in underdeveloped areas of Italy.

The productions was in double firing,a process that requires 48 hours to produce because as the word says the tiles needed to fired the support first, nicknamed **biscuit**, then apply the glaze and re-fire again to have a finished products.

This process was done **using local clay, called red clay**, to produce the biscuit (body of the tile) and the firing was a slow 12 hours each time at a considered low temperature of 800 C° degree, this low

temperature basically allowed to produce any colours without limitation but on the other hand the biscuit was not waterproof with lack of strength.

Later during the 80's this technology was updated to a single firing process requiring 55 minutes at 900 C° degree, in order to resist to a higher temperature and quicker firing the local **red clay was completely dismissed and substituted with a more refined white body clay.**

This clay generally imported is washed prior to be used with a process named atomised, the final cleaned

result increase the level break point temperature prior of the melting limits, that gives more strengths to the body of the tiles with a cleaner products.

Cleaning & Maintenance Instruction

(CERAMIC/PORCELAIN TILES)

DURING INSTALLATION:

1. Do not allow any tile adhesive or excess grout to dry on the proper surface of the tile. Unwanted adhesive or excess grout should be cleaned a few minutes after application or before the material become dry. Cleaning should be performed according to the adhesive or grout manufacturer's method and instruction..
2. For protection against construction dirt, scratches and incidental mutilation, the tiles already laid or fixed on the floors must be covered within the duration of the construction.
3. The installed tiles should be cleaned and free from all kinds of construction dirt and grimes before handing over the project..

FOR REGULAR CLEANING & MAINTENANCE:

1. Wipe off dusts from the surface of the tiles on regular schedule.
2. Dilute 100 ml of commercial degreasing agent (for example: KIWI Kleen Floor Super Active) to 5 litres of clean water.
3. Apply and wipe over the surface with the use of cotton cloth or sponge or mop. Rinsing is not necessary.
4. For floors, allow the cleaned area to dry before permitting pedestrian passage.

FORTUNA ZINGARA
LONDON

Cleaning & Maintenance Instruction

(CERAMIC/PORCELAIN TILES)

FOR CLEANING WITH FLOOR WASHING MACHINE:

1. Wipe off dusts from the surface of the tiles.
2. Dilute 100 ml of commercial degreasing agent (for example: KIWI Kleen Floor Super Active) to 5 litres of clean water.
3. Pour the solution into the tank, start the floor washing machine and clean the area.
4. Allow the cleaned area to dry before permitting pedestrian passage.

FOR REMOVAL OF COMMON MARKS OR STAINS:

1. Wipe off dusts from the surface of the tiles.
2. Use undiluted commercial degreasing agent (for example: KIWI Kleen Floor Super Active).
3. Apply and rub over the surface with the use of cotton cloth or sponge or mop.
4. Rinse with water and wipe with dry cotton cloth or mop.
5. For floors, allow the cleaned area to dry before permitting pedestrian passage.

FORTUNA ZINGARA
LONDON

Cleaning & Maintenance Instruction

(CERAMIC/PORCELAIN TILES)

FOR REMOVAL OF STUBBORN MARKS OR STAINS:

1. Wipe off dusts from the surface of the tiles.
2. Depending on the type of tiles and stain, use undiluted commercial degreasing agent (for example: KIWI Kleen Floor Super Active). Undiluted specialized cleaning agents such as FILA Deterdek, FILA PS/87, FILA PH Zero or other brands of cleaning solutions can also be used.
3. Spread the solution over the affected surface and leave for approximately 3-5 minutes or longer, to allow cleaning reaction. It is recommended to clean initially a sufficiently visible section of a tile and examine the result if suitable, before proceeding to clean the area covered with this material.
4. Rub the solution over the affected surface with the use of cotton cloth or sponge. Use scouring pad, if the marks or stains persist. For large areas, the use electric floor polisher is *recommended*. 5)
5. Rinse with water and wipe with dry cotton cloth or mop.
6. Repeat steps 2 to 5 if necessary.
7. For floors, allow the cleaned area to dry before permitting pedestrian passage.

NOTICE!

- Cleaning and maintenance program depends essentially on the density of traffic, the condition of the surrounding area where the tiles are installed and the nature of dirt to which the floors or walls are exposed. Thus, routine cleaning and maintenance must be performed according to specific requirements.
- The performance of a product is limited to such an extent. Any spillage of tea, coffee, paint, permanent marker, hair dye and the like on the tiles must be immediately cleaned to prevent severe staining. It is possible that these substances may leave light mark or slight dis-coloration on the tiles if not immediately cleaned.
- It is not advisable to use hydrofluoric acid solution or its compound for cleaning.
- Do not use metal tools to scrape the dirt from the surface of the tiles.
